

# OUR FUTURE!

***The biggest obstacle to Hydro-power development is not a technical obstacle but one of public perception and government approval. At RB Manufacturing we are educating the public to raise the appreciation of Hydro-power to the level enjoyed by wind and solar. And here are the tools we are using:***

## ***Welcome to the World of the PowerWheel!***

The PowerWheel is a micro hydro generator - an amazing tool for learning about energy, hydro-power and other renewable sources of energy. Utilizing a Pelton Wheel turbine, the PowerWheel provides a hands-on, visual way to explore the world of energy by using water from your tap.

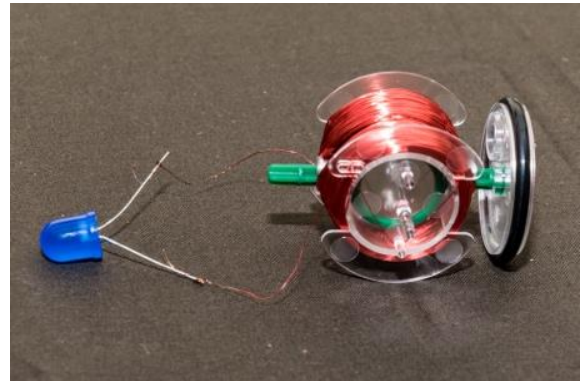

*That's right...imagine using water from your tap to power up your laptop or charge your cell phone!*

## ***Introducing the: Transparent Alternator Kit (TAK)***

Here is the opportunity to build your own source of electrical energy...and experience first-hand mankind's greatest discovery!

The TAK is a simple kit that comes with easy to understand instructions, requires no tools and comes in individually packaged units.

In less than 20 minutes, you can create a device that will not only provide the energy to light up an LED...but will help you understand how it happens. *By using the TAK, you are actually initiating manipulation at the atomic level!*

***With these "hands on" teaching tools along with other resources from our website you can make Hydro-power come alive!***
